File Naming Conventions

[Recommended File Naming Conventions for ETDs](#) (75.22 KB)

Linking and Media Files

When selecting a media file format to include in your dissertation or thesis, you want to consider accessibility, long-term preservation. For example, you do not want to use a file format that uses software that is proprietary or not widely available to your readers.

External Links

1. Links pointing to sources outside of the main body of the document should not be embedded in the document.
2. These links may change or the pages withdrawn over time and the reference to that page are lost.
3. Possible exceptions would include a link to an archived website.
4. Links embedded in the main body of the document, should not link to the supplementary files, instead reference the files in the body of the document and point to the location of those files.

Internal Links and Bookmarks

1. Within the main document are permissible – for example bookmarks in the table to contents.
2. Links that are internal to the main document

Multi-media File Types and Formats

ProQuest highly recommends placing multi-media files as supplementary files rather than embedding them in the body of the document. Supplementary files are exempt from the page margin restrictions and will be downloaded to a CD and placed in a back pocket of the printed document.

Multimedia files and formats supported by ProQuest for long-term preservation. [More file formats supported by ProQuest.](#)
